

Gulf of Mexico Harmful Algal Bloom Bulletin

Region: Southwest Florida Monday, 06 August 2012 NOAA Ocean Service

NOAA Satellite and Information Service

NOAA National Weather Service Last bulletin: Monday, July 30, 2012

Satellite chlorophyll image with possible HAB areas shown by red polygon(s). Cell concentration sampling data from July 29 to August 2 shown as red (high), orange (medium), yellow (low b), brown (low a), blue(very low b), purple (very low a), pink (present), and green (not present). For a list of cell count data providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

Conditions Report

There is currently no indication of a harmful algal bloom in southwest Florida, including the Florida Keys. No impacts are expected alongshore southwest Florida today through Sunday, August 12.

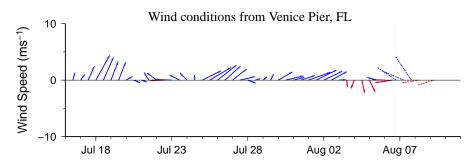

Analysis

There is currently no indication of a harmful algal bloom in southwest Florida, including the Florida Keys. Background concentrations of *Karenia brevis* were identified from a sample collected alongshore northern Manatee County (8/1; FWRI). *K. brevis* was not identified in samples collected alongshore Pinellas, Sarasota, Charlotte, Lee or Collier counties, or offshore the Florida Keys (7/29-8/2; FWRI, MML, CCPCPD, SCHD).

Recent MODIS imagery (8/4; shown left) is partially obscured by clouds, limiting analysis along the coast of Monroe County. A band of elevated to high chlorophyll (2 to >10 μ g/L) is visible alongshore from Pinellas to Monroe counties. Discolored water and elevated chlorophyll identified at the coast may be the result of various non-toxic blooms that continue to be reported throughout the region.

Harmful algal bloom formation alongshore southwest Florida, including the Florida Keys, is not expected today through Sunday, August 12.

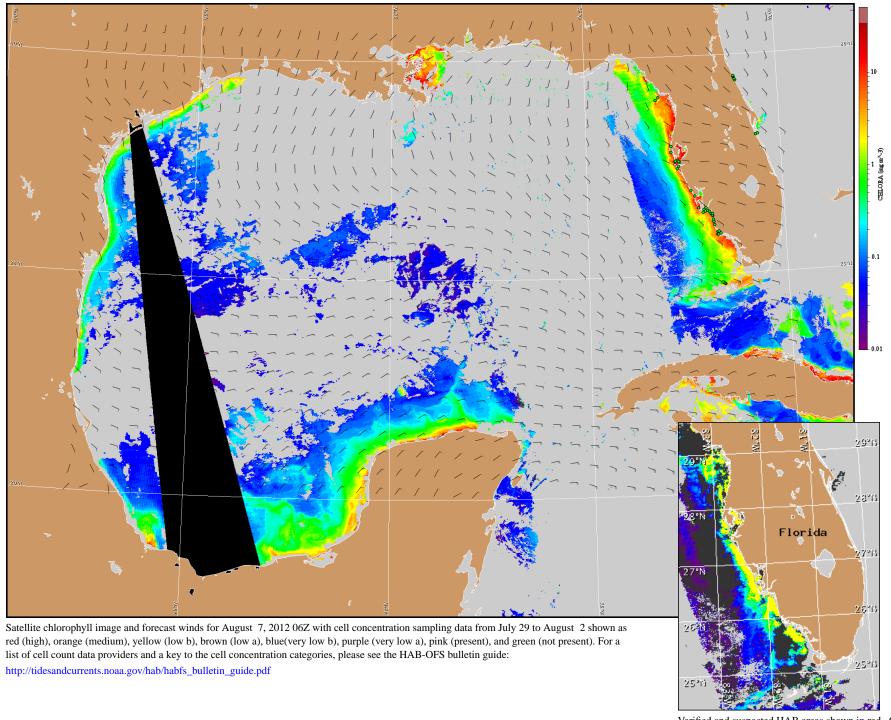

Kavanaugh, Fenstermacher, Davis

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS).

Wind Analysis

Southwest Florida: South to southeast winds (5-10 kn, 3-5 m/s) today through Tuesday. Southwest to south winds (5-10 kn) Tuesday night through Wednesday night. Southeast winds (5 kn, 3 m/s) Thursday becoming southwest winds in the afternoon. North winds (5 kn) Thursday night becoming east winds after midnight. Southeast to south winds (5 kn) Friday.

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
